PROJECTS

Creative Writing Practice App - C, TCP Networking, Concurrency

- Engineered a modular multi-client TCP server supporting real-time collaboration and stable multi-threaded execution.
- Built parsing, networking, and state-management layers to improve maintainability, debugging clarity, and overall code quality.
- Developed load-testing and instrumentation tools to surface race conditions, deadlocks, and performance bottlenecks; applied structured logging for root-cause analysis.
- Added a Node.js/Express REST API to expand accessibility and validate system behavior across multiple client types.

Capstone Project - C++, Unreal Engine

- Implemented behavior-tree AI and procedural-generation systems using clean OOP design and reusable components.
- Designed constraint-based difficulty systems informed by player behavior; validated logic through iterative testing and profiling.
- Optimized performance-critical C++ code to reduce frame-time spikes and improve runtime stability and user experience.

EXPERIENCE

Freelance Video Editor

January 2024 - June 2024

- Delivered 80+ assets under tight deadlines while managing version control, file pipelines, and iterative feedback cycles.
- Collaborated with clients to refine requirements, demonstrating clear communication, requirement gathering, and iterative improvement.

EDUCATION

Pacific Lutheran University - *Bachelor of Arts, Computer Science*

September 2023 - December 2025

SKILLS

Object-oriented design

SDLC & Agile workflows

Unit & functional testing

Test strategy & automation concepts

Debugging, profiling, root-cause analysis

REST APIs

Backend Infrastructure & Web
Development

Programming Languages

C/C++

Java

JavaScript

Python

HTML/CSS

SQL

Tools

Git/GitHub

Linux

Docker
